EXPERIENCE

GarudaUAV

Noida, India

AI / Computer Vision Engineering Intern

Jan 2026 – June 2026

- Built a one-click auto-annotation tool on Meta's Segment Anything Model (SAM) with multi-format export (YOLO / COCO / Pascal VOC), batch processing, and a Streamlit/Gradio UI, cutting manual labeling effort by up to 80%.
- Built an LLM-powered tool that extracts 8 evaluation metrics from YOLOv8/v11 training runs and auto-generates branded PDF/HTML model-evaluation reports via few-shot prompts, replacing hours of manual analysis.
- Designed a six-stage aerial tree-detection and counting pipeline using zero-shot GroundingDINO, ResNet-18 embeddings, and a Random Forest false-positive filter — retraining-free and deployable to new sites out of the box.

AI/ML Intern

Jun 2025 – Aug 2025

- Built a YOLOv8 detection pipeline for drone imagery with single-class culvert detection; improved validation mAP@0.50 from 0.63 to 0.71 and recall from 0.68 to 0.76, and cut false positives by 18% via class-specific thresholds and post-processing.
- Expanded the training set from 300 to 1,240 effective images (mosaic augmentation, noise injection, synthetic data), reducing the train-validation gap by 7.8 points.

Startup School (early-stage entrepreneurship platform)

Mumbai, India

Operations & Community Lead

Oct 2025 – Dec 2025

- Owned on-ground operations for a founder meetup: coordinated a 4-person distributed team and secured a free Andheri venue by pitching a co-marketing partnership to DevX, removing the event's largest cost for a bootstrapped startup; also led cohort outreach and event research across Mumbai, Pune, and Delhi.

PROJECTS

Flickstat | Founder & Full-Stack Engineer | flickstat.com

- Founded Flickstat after identifying a market gap between consumer fan apps and professional scouting tools, positioning it as a free, analytics-native football platform; own product, design, engineering, and growth as the sole developer in a 3-person team.
- Grew it from launch to ~1,200 visitors and 100–150 monthly active users in its first month through organic distribution alone on Reddit and Twitter, bootstrapped with zero paid marketing.
- Engineered the entire stack solo — a Python data pipeline, a Supabase Postgres backend, and a Next.js frontend on Vercel — including a canonical entity-resolution layer that unifies player data from four providers and a hybrid rendering layer using on-demand ISR revalidation and SSR to serve over 1,000 pages.

End-to-End ML Data Pipeline Platform | Python, Pandas, Supabase, FastAPI, OpenCV, Docker

- Built a config-driven ML pipeline turning raw file/database/API data into trained models — validation, cleaning, feature processing, augmentation (tabular/text/image), and evaluation — with versioned, reproducible run outputs.
- Containerized the system with Docker and built a React/TypeScript interface to track run progress, preview datasets, and view run summaries, backed by a modular workflow runner.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | Issued May 2026 | [Verify credential](#)

AWS Certified Cloud Practitioner | Issued April 2025 | [Verify credential](#)

TECHNICAL SKILLS

Languages: Python, TypeScript, Go, C, SQL

ML / Computer Vision: PyTorch, TensorFlow, OpenCV, YOLOv8/v11, GroundingDINO, SAM, ResNet, scikit-learn

Web & Backend: Next.js, React, Node.js, FastAPI, Tailwind CSS, Supabase (PostgreSQL)

Cloud & DevOps: AWS (ECS, RDS, ALB, ECR), Terraform, Docker, Git, CloudWatch

Tools: Playwright, n8n, Jupyter, VS Code, Cursor, Notion

INTERESTS

Hackathons, Mumbai tech meetups (host & attendee), Drums & beatboxing, Table tennis, Snooker

EDUCATION

Manipal Institute of Technology

B.Tech in Computer Science Engineering

Manipal, India

Sep 2022 – Jul 2026
